# innovation for discovery

Arrowmight has been a leader in the design, manufacture and installation of high quality equipment to maintain operational efficiency in laboratories and sterile manufacturing workplaces for more than 20 years.

Critical environments are our special interest since the company's foundation. Our innovative approach and deep understanding of client needs has provided tailor-made, cost-effective solutions for a host of pharmaceutical, biotech and agrochemical companies, contract laboratories, research institutions, government agencies and academic establishments across the world, including the United Kingdom, Europe, the United States and the Far East.

We believe in building close professional partnerships, offering direct access to our team's extensive project, product and

design knowledge. It is an approach which offers reliability and flexibility.

We can work together in different ways, depending on your needs. For example, you can call us in during the first design stages of your laboratory or other facility, and we'll find the most efficient, value-for-money solution for you. Or we can help you develop or refurbish your existing facility with a completely scalable answer.

Technology never stands still and neither do our product development experts. They are entirely focused on enhancing Arrowmight's product and service range to deliver the

most advanced solutions. On time – and at the right price.

#### Arrowmight – protecting the integrity of critical environments

Arrowmight's story began with the founding of Modular Systems and Developments (MS & D) in Woolwich, London in 1983. A management buy-out followed in 1991 and Modular Systems Hygiene Services was founded in 1992. In 1994 we relocated to Hereford, acquired plastics experts Labcare Precision (LCP) and consolidated all our activities under the title Arrowmight. The acquisition of GMP Products Ltd, a specialist supplier of

hygiene products and equipment to the health services, in 2001 further strengthened our position as a market leader.

Arrowmight, a privately owned British registered limited company with its main base in Herefordshire, is continually expanding to meet market demands. It currently engages the skills of around XXX (HOW MANY?) technically qualified and experienced design and fabrication experts as well as an engineering and technical support team.

#### Our services include:

- Design and build consultancy
- Full technical and product support
- Product development
- Project management
- Installation and commissioning of Arrowmight equipment
- Service and maintenance contracts

# advance

- Animal Housing
- Clean Air Integrity systems
- Stainless Steel Equipment and Specialist Fabrication
- Environmental Monitoring and Security Systems
- Hygiene Systems
- Technical Services

## advancing technology in critical environments

We work exclusively in the rapidly changing world of critical environments. We offer innovative, engineered solutions for maintaining, controlling and monitoring these environments to the highest levels of accuracy, ensuring full compliance with both current GLP and GMP requirements and HSE regulations.

We also take our environmental responsibilities seriously and provide a full recycling service for all our products.

**Animal Housing**  
We supply the most comprehensive range of animal environments in Europe, with a major design-and-build service for international contract and pharmaceutical research organisations.

Our animal caging and pens are fabricated to the highest standards, with a full range of ancillary equipment including transporters, racks and trolleys.

Consult us and, together, we'll find the right solutions, using the latest concepts in conventional caging or ventilated racks, cage cleaning stations and environmental systems.

**Clean Air Integrity systems**  
For laboratories requiring particle-free air or needing to protect the environment and operators from hazardous pathogens or toxic chemicals. Our ISO and BS Standards compliant safety cabinets and isolator systems are at the forefront of clean air and containment technology.

**Stainless Steel Equipment and Specialist Fabrication**  
We have extensive expertise in the design and installation of workstations for laboratory work areas, pharmaceutical manufacturing and sterile environments. We offer both

standard products and individually designed solutions.

And if you want consistency with your existing equipment, we can fabricate to match.

**Environmental Monitoring and Security Systems**  
The highly flexible, user-friendly Arrowright Argus is specially designed for environmental monitoring, data collection and storage. This adaptable, scalable system provides round-the-clock, completely accurate data on environmental variables, including alerts and alarms.

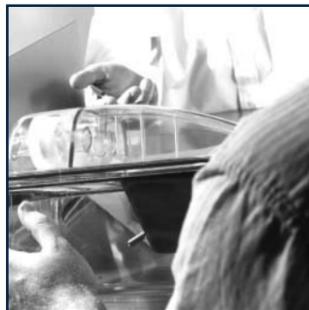

**Hygiene Systems**  
We are experts in the highly specialised field of decontamination of laboratory environments. Our full range of equipment including cage washers and complementary consumables can meet every need, from routine cage cleaning to decontaminating critical areas.

**Technical Services**  
Arrowright gives you all the help you need, with our comprehensive consultation service. We'll help you take ideas from the early concepts through development and manufacture to installation and after-sales support.

# Innovation through partnership

We offer flexibility, advice, consultation and tailor-made solutions not just a wide range of standard products. Our many years of experience in the highly specialised field of critical environments have given us an intimate knowledge and understanding of our clients' needs for the highest levels of accuracy and security.

The Bioscience industry is the most exacting in the world. It demands the very best from suppliers – and at Arrowright, outstanding quality, value and service come as standard.

We have shown time and again that the best way to achieve these high standards is through close co-operation with our clients. You will work alongside dedicated, teams who will advise and support you at every stage of each project. They will never be more than a phone call away.

Our experts will work with you from initial design to installation and beyond. Equipment and software can be personalised to meet every

demand, however exacting. As your work continues, we can help with any necessary modifications – our equipment is always fully scaleable.

We understand the constraints that you work under, so we always find the most efficient, cost-effective solutions – and you have the equipment, technology and support needed to carry out projects effectively.

#### **Quality Assurance**

All our products are quality tested during and after manufacture to meet your requirements

#### **Installation**

All installations are carried out by Arrowright qualified personnel

#### **Product Warranty**

All our products carry a full 12-month warranty with optional extensions

#### **Service and Maintenance**

We offer personalised care for all Arrowright products, either on an individual call-out basis or through annual service and maintenance contracts

#### **We work with:**

- Planners, project managers, surveyors and architects designing new-build or modified research facilities
- Major research centres embarking on large-scale research projects
- Small, highly specialised university research teams
- International pharmaceutical companies developing new products
- Teaching hospitals' research and development teams
- Manufacturers seeking the highest levels of quality control and validation
- Major agrochemical companies

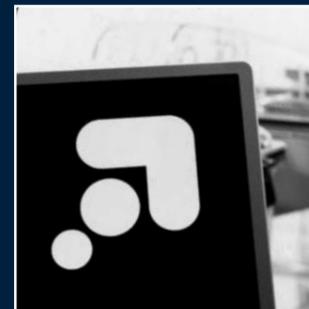

# innovate

# research and development

Our active house product development programme is constantly updating, improving and enhancing our innovative product range and reviewing the needs of the scientific community. This approach has kept Arrowmicht at the forefront of new solutions in the field for the past two decades and will figure highly in the decades to come.

As experts in the rapidly changing area of critical environments, we not only provide solutions but also discover new, effective ways to confront new situations in the dynamic and rigorous world of research – and this stems from the experience and partnerships we enjoy with our clients.

Arrowmicht's designers work with the latest computer-aided design software and provide accurate two and three-dimensional drawings of rooms showing how equipment will be located to provide you with the perfect layout. The solutions we propose are compliant with both current GL and GMP requirements and HSE regulations.

Quality, value and service to all our customers are an essential part of our approach and – to complement our customer design service – the Arrowmicht product development team are always on hand to support you.

#### **Merck Sharp & Dohm**

Collaboration with an international pharmaceutical company to provide highly individual caging system for dogs and primates, combining enriched environment for animals with practicality for researchers.

#### **Cancer Research UK**

A project with one of Europe's leading cancer research charities to design and develop a new IVC – individually ventilated cage – system for use in their ground-breaking research.

#### **Innovation and collaboration**

Arrowmicht's success has been built on close collaboration with expert partners, both suppliers and clients.

#### **Some recent examples include:**

– One of the UK's leading air technology companies was commissioned by Arrowmicht to provide a unique Air Management Unit and cage/containment system to improve research facilities even further.

– Components for Argus, our state of the art Environmental Monitoring System were commissioned from the US and European university instrumentation market leaders.

– We worked with a major one of the world's leading pharmaceutical

companies to provide highly individual caging system for dogs and primates, combining an enriched environment for the animals with practicality required by technicians and researchers.

– We collaborated with one of Europe's leading cancer research charities to design and develop a new IVC – individually ventilated cage – system for use in their vital ground-breaking research.

# act

**Arrowmight has achieved its leading status in critical environment monitoring through constant innovation. Our innovations are based on our understanding of your needs.**

**First we find out as much as we can about your business and your objectives; then we devise the most effective, value for money solution available.**

**All part of Arrowmight's dedicated service – to you.**
